SIMATS ENGINEERING (SAVEETHA SCHOOL OF ENGINEERING)

Department of Computer Science & Engineering

CO1 - ASSESSMENT TOOL - 1

DESCRIPTIVE WRITTEN TEST

Course Code	**CSA3717**	**Course Title**	**Software Testing**
CO Assessed	**CO1**	**Assessment**	**Assessment Tool 1: Descriptive Written Test**
Weightage	**50% of CIA**	**Total Marks**	**100**
CO1 Statement	*Apply software testing principles to enhance the effectiveness of software quality assurance and improve defect detection strategies.* **(BL3)**		
Student Name	B.Bhavana	**Reg. No.**	192312428
Section/Batch	**Slot A /**	**Date**	**21-10-2026**

Code of Conduct:

I,B.Bhavana certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

Signature of the student:

Question:

Solution:

Criteria	Weightage	Level 4 (Exemplary)	Level 3 (Proficient)	Level 2 (Developing)	Level 1 (Beginning)	Marks
Understanding of Concepts	25%	Demonstrates thorough, accurate understanding of concepts	Good understanding with minor gaps	Basic understanding with some misconceptions	Poor understanding; major misconceptions	
Explanation	25%	Detailed, well-explained answers with relevant examples	Clear explanation with adequate details	Limited explanation; lacks depth	Poor or unclear explanation	
Application	20%	Effectively applies concepts with strong analytical ability	Applies concepts with minor errors	Limited application with weak analysis	No application or incorrect analysis	
Organization	20%	Well-structured answers with logical flow and coherence	Organized with minor issues in flow	Basic structure, lacks clarity	Poor organization, incoherent answers	
Accuracy	10%	Completely accurate and covers all required points	Mostly accurate with minor omissions	Partially correct with missing points	Incorrect answers with major gaps

SIMATS ENGINEERING

MCQ Test

COURSE NAME: Software Testing **COURSE CODE: CSA3717**

COURSE OUTCOME COVERED

CO1: *Apply software testing principles to enhance the effectiveness of software quality assurance and improve defect detection strategies.*
Assessment Tool Weightage: 20%

Sl. No	MCQ Questions
1	A team applies systematic test design techniques during development. This reflects: a) Debugging b) Testing as an engineering activity c) Maintenance d) Deployment
2	If a project skips defined testing processes, what is the likely outcome? a) Faster delivery with high quality b) Increased defects in production c) Reduced testing cost only d) Improved documentation
3	Selecting test cases based on requirements demonstrates: a) Random testing b) Process-driven testing c) Ad hoc testing d) Maintenance testing
4	Applying equivalence partitioning is an example of: a) Debugging b) Test design technique c) Coding standard d) Deployment activity
5	A tester identifies missing requirements during testing. This shows: a) Coding error b) Process gap c) User error d) Hardware issue
6	Following a structured testing lifecycle ensures: a) Random defect detection b) Improved software quality c) Less documentation d) No defects
7	Which activity best represents testing as a process? a) Writing code b) Executing test cases systematically c) Deploying software d) User training
8	A tester reuses test cases from a repository. This supports: a) Efficiency in testing b) Increased coding errors c) Reduced coverage d) Random testing
9	If defects are tracked and analyzed, it improves: a) Coding speed b) Software quality process c) Deployment time d) User interface
10	Applying boundary value analysis helps to: a) Increase documentation b)

	Detect edge-case defects c) Reduce execution time d) Avoid testing
11	A tester validates system behavior against requirements. This is: a) Verification b) Validation c) Debugging d) Coding
12	Detecting defects before release reduces: a) Development effort b) Maintenance cost c) Coding standards d) Testing scope
13	Applying testing principles ensures: a) Zero defects guarantee b) Early defect detection c) No testing needed d) Faster coding
14	Which principle suggests testing all inputs is impossible? a) Exhaustive testing b) Exhaustive testing is impossible c) Early testing d) Defect clustering
15	A tester focuses on frequently failing modules. This uses: a) Random testing b) Defect clustering principle c) Regression testing d) Smoke testing
16	If testing starts early in SDLC, it helps: a) Reduce defects cost b) Increase coding errors c) Delay project d) Skip documentation
17	A tester designs test cases independently from developers. This ensures: a) Bias b) Objectivity c) Delay d) Redundancy
18	A tester reviews requirements for errors. Role performed is: a) Developer b) Tester c) Manager d) User
19	Reporting defects clearly is part of: a) Coding b) Tester's responsibility c) Deployment d) Maintenance
20	A tester collaborates with developers to fix bugs. This shows: a) Isolation b) Teamwork c) Delay d) Redundancy
21	A requirement ambiguity causes defects. Origin is: a) Coding b) Requirements phase c) Testing phase d) Deployment
22	Incorrect algorithm implementation leads to: a) Requirement defect b) Design defect c) Coding defect d) Testing defect
23	Missing validation checks are example of: a) Design defects b) Coding defects c) Requirement defects d) Deployment defects
24	Poor UI design causing confusion is: a) Coding defect b) Design defect c) Requirement defect d) Hardware defect
25	A system crash due to memory leak is: a) Requirement defect b) Coding defect c) Design defect d) Documentation defect

26	Classifying defects based on severity helps: a) Ignore defects b) Prioritize fixing c) Delay release d) Increase cost
27	A critical defect impacts: a) Minor feature b) Core functionality c) UI color d) Documentation
28	A minor defect example is: a) System crash b) Login failure c) Typo error d) Data loss
29	Defect classification helps testers to: a) Ignore bugs b) Organize defects c) Skip testing d) Increase errors
30	A defect repository is used to: a) Store code b) Store test cases c) Store defect details d) Store UI designs
31	Reusing defect data helps in: a) Predicting issues b) Increasing bugs c) Reducing tests d) Skipping phases
32	A defect repository improves: a) Code complexity b) Testing efficiency c) User interface d) Deployment speed
33	Logging defects with details ensures: a) Confusion b) Traceability c) Delay d) Redundancy
34	A tester uses past defect data to design tests. This is: a) Random testing b) Experience-based testing c) Debugging d) Deployment
35	Incorrect login validation is an example of: a) Functional defect b) Performance defect c) Security defect d) UI defect
36	Slow response time is a: a) Functional defect b) Performance defect c) UI defect d) Coding standard
37	Unauthorized data access indicates: a) UI defect b) Security defect c) Functional defect d) Design defect
38	Missing button functionality is: a) Functional defect b) Security defect c) Performance defect d) Hardware defect
39	Poor alignment in UI is: a) Functional defect b) UI defect c) Security defect d) Design defect
40	Applying testing principles avoids: a) Coding b) Redundant tests c) Deployment d) Maintenance
41	A tester validates outputs using expected results. This is: a) Debugging b) Test execution c) Coding d) Maintenance
42	If defects are not tracked, it leads to: a) Better quality b) Poor traceability c) Faster delivery d) No impact
43	Applying test process ensures: a) Random results b) Structured testing c) No defects d) No planning
44	Test case design based on requirements ensures: a) Low coverage b) High coverage c) No defects d) Less effort

45	Early testing reduces: a) Defect cost b) Code size c) UI design d) Deployment time
46	A tester identifies repeated defects. This indicates: a) Good design b) Poor process c) No issue d) Perfect testing
47	Reviewing test results helps: a) Ignore defects b) Improve quality c) Skip testing d) Reduce effort
48	A tester applies regression testing to: a) Add features b) Ensure fixes work c) Deploy software d) Design UI
49	Identifying root cause of defects helps: a) Increase bugs b) Prevent recurrence c) Delay testing d) Skip coding
50	A test plan ensures: a) Random execution b) Organized testing c) No testing d) No defects
51	Applying defect classification improves: a) Testing cost b) Fix prioritization c) Coding errors d) UI design
52	A tester uses historical defect trends. This helps in: a) Ignoring defects b) Risk-based testing c) Deployment d) Coding
53	Testing ensures product meets: a) Developer needs b) User requirements c) Tester goals d) Manager plans
54	A defect due to wrong requirement interpretation is: a) Coding defect b) Requirement defect c) UI defect d) Hardware defect
55	Applying process standards ensures: a) Poor quality b) Consistent quality c) No testing d) Random output
56	A tester documents defects clearly. This helps: a) Developers fix quickly b) Increase errors c) Delay release d) Reduce quality
57	A defect repository is analyzed to: a) Increase cost b) Improve testing strategy c) Skip testing d) Reduce quality
58	A tester applies black-box testing. This focuses on: a) Internal code b) External behavior c) Hardware d) Deployment
59	Defects found in testing phase indicate: a) Perfect design b) Earlier phase issues c) No issues d) Hardware problems
60	Applying structured testing improves: a) Random results b) Product reliability c) Coding errors d) Deployment delay

Code of Conduct:

I, M Sandhya(192312421), certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment.
I understand that any violation of academic integrity rules will result in disciplinary action.

RUBRICS FOR CALCULATION:

Criteria	Weightage (%)	Level 4 (Exemplary)	Level 3 (Proficient)	Level 2 (Developing)	Level 1 (Beginning)
Conceptual Understanding	30%	Demonstrates thorough understanding; answers all questions accurately	Shows good understanding with few errors	Partial understanding; several incorrect responses	Lacks understanding; majority of answers incorrect
Accuracy of Answers	25%	All answers are correct	Most answers are correct with minor mistakes	Some correct answers; frequent errors	Mostly incorrect answers
Application of Knowledge	20%	Correctly applies concepts to problem-based questions	Applies concepts with minor errors	Limited ability to apply concepts	Unable to apply concepts
Time Management	15%	Completes quiz well within time efficiently	Completes on time with minor delays	Requires extra time or rushes through questions	Unable to complete within given time
Question Interpretation	10%	Interprets all questions correctly and responds appropriately	Misinterprets a few questions	Often misinterprets questions	Unable to understand questions
